

Shaft Capping and Mining Remediation

Carnon Contracting provide a full range of solutions to the problems created by historic mining and have the equipment.

Techniques used include :-

- Shaft Capping/Plugging of abandoned mine workings.
- Grouting of mine shafts/stopes from surface and underground.
- The installation of geogrid ground reinforcement over mine affected areas.
- The installation of Grills, fences and barriers to prevent unauthorised access to underground workings or shafts.
- Piling, underpinning and repairs to affected buildings.

Fixing reinforcement to a shaft cover slab, Nr Redruth, Cornwall

Many small shaft capping/plugging projects are for private individuals and local companies.

Placing steelwork for formwork for a shaft collapse scheme using a man riding basket suspended from a crane in Camborne, Cornwall

- Health and Safety trained operatives and management
- Confined spaces trained site and management team
- CSCS scheme in operation for site and supervision staff

We are fully aware that many mine shafts, workings etc are situated in areas of great ecological or archeological significance and we will work with the relevant authorities to minimise any disruption to such areas.

We can also provide a Mine Manager as per the current legislation contain in the Mines and Quarries Act for this type of scheme.

Previous clients have included :-

- Kerrier District Council, Cornwall :- many Land Reclamation Projects up to £180K.
- Cornwall County Council :- Land Reclamation projects up to £200K
- Tilbury Douglas :- The mining remediation works on the route of the new A391 St Austell NE Distributor road. Circa £130K.
