

# Site Investigation Drilling

Carnon Contracting provide a full range of site investigation drilling services to the Building, Construction & Environmental industries.

Owning a wide selection of drilling rigs and equipment, we provide cored holes up to 116mm in diameter and up to 300m deep or ordinary rotary drilling up to 200mm in diameter.

- Health and Safety trained operatives and management
- Confined spaces trained site and management team
- CSCS scheme in operation for site and supervision staff

Carnon, having come from a mining/geological background, understand that a client wants information, not holes, and have achieved a reputation for the quality of the information provided by our bore holes especially in terms of core recovery .

We can drill in almost any location from difficult terrain or confined spaces with small man portable drill rigs to sites with our larger rotary drill rigs.

We also own a range of very compact drill rigs suitable for use in Dam Galleries together with other confined spaces and have the experience and knowledge to carry out this kind of work.

Previous projects have Included :-

- Diamond core drilling along the line of the Penzance-Newlyn Interceptor tunnel for Trafalgar House Construction.
- Orientated Diamond Core Drilling in the apron of Argal Dam in Cornwall to provide geotechnical data for the assessment of the stability of the dam in response to possible seismic events for South West Water Plc
- Environmental drilling and sampling for Dames & Moore including 'SPT's, sampling, and the installation of permanent sampling wells.
- Site Investigation drilling in respect of possible mining subsidence on properties throughout the West Country.

Our staff include several geologists experienced in Site Investigation work and if required we can provide a full service to the client including the design of the drilling program and the recording and interpretation of the results.
